

# Download Infectious Diseases Of Livestock 3 Volume Set

Most of the important infectious diseases that threaten livestock--including heartwater, bluetongue, African horse sickness, African swine fever, babesiosis, anaplasmosis, and trypanosomiasis --occur endemically on the Southern African subcontinent and are responsible for major stock losses annually. Volume 25, Number 1—January 2019 - Emerging Infectious Diseases journal - CDC1. Introduction. Despite significant attention given to animal diseases in the last half-century, our understanding of disease processes, and how to manage them at the livestock–wildlife interface, remains limited (Rhyan and Spraker, 2010). A pandemic is an epidemic occurring on a scale which crosses international boundaries, usually affecting a large number of people. Pandemics can also occur in important agricultural organisms (livestock, crop plants, fish, tree species) or in other organisms.
